+ Personal Statement

I am excited to become a web developer and work with applications that empower users to achieve their goals. For the past year and a half, I have been learning the fundamentals of web development, designing and building full stack applications that solve problems from my work experience as a real estate marketing and sales development.

Part of my job was to create make a monthly market analysis report which was a manual, repetitive and time-consuming task. My first application did all the work manually and saved me lots of hours and pains, thus igniting my spark to create tools that help solve real world problems.

Portfolio

+ Real Estate Web Scraper

► An automated scraping engine that collects property information from listing websites and a front-end application which displays market statistics for properties in Burgas.

+ ArtHub:

► A full stack CRUD application build with React, Node, Express and MongoDB. Users can browser through paintings and artists, and share their own artwork with others.

+ Interior Customizer

► Clone project of a real estate residential marketing website which lets homebuyers customize their home based on different designs, features, and add-ons.

Work Experience
